(54) Title: FILM FOR GROWING TURFGRASS SOD

(57) Abstract: The present invention relates to a film for carpet type lawn culture. The film of the present invention is made of a synthetic resin and is configured such that a plurality of drain holes are bored at a predetermined interval and have their total area corresponding to 2 % to 20 % of an area of the film. According to the present invention, washout of a compost layer can be greatly reduced since water is smoothly discharged through the relatively large drain holes, and the lawn can absorb nutrients from the soil of the ground and grow well since roots of the lawn are taken into the soil of the ground.
